

Affordable Video Conferencing for Every Desktop in Your Enterprise

In this day of *instant* everything, face-to-face communication is still the most effective way to get your message across.

Adding video-broadcasting capabilities to your current network allows you to bring together ideas, projects, and most importantly, **people**—even when they are thousands of miles apart.

Now you can bring high quality, full screen, real-time video to **every desktop** in your enterprise, at a surprisingly affordable cost. **DigiGAN** can leverage your current infrastructure to allow you to send and receive video streams as easily as making a phone call.

DigiGAN can create a custom video broadcasting solution for you, precisely tailored to your needs. We configure the best-of-class streaming software and hardware into solutions for anything from everyday video conferencing to a one-time broadcast event.

Multi-Point, Bi-Directional Conferencing

DigiGAN is the only solution provider in the market today offering multi-point, bi-directional video conferencing for less than the cost of old fashioned, one-way video streaming.

DigiGAN video conferencing systems support up to eight interactive participants, from eight locations, at a time. Taking advantage of DSL's high band-width, we can broadcast full screen, high-resolution video at up to 1024 x 768 on any standard computer monitor. Software controls allow each viewing station to determine which participants they can see and hear.

Bring together ideas, projects, and people — even when they are thousands of miles apart.

DigiGAN video conferencing systems utilize always-on DSL technology instead of costly, dedicated ISDN.

- ISDN lines are dedicated for one-way video streaming only, and costs up to \$5,000 per installation per site from your local telephone service provider.
- DSL offers access that can be used by everyone in your enterprise, has a low fixed cost per month, and is easily upgradeable to scale to your growing needs.

Features

- See and hear multiple participants
- High quality, full-screen video
- Always on, multi-use DSL
- Integrates with most popular networks
- Small, unobtrusive cameras

Benefits

- More efficient, clearer communication
- Better ROI on infrastructure (less expensive, wider use)
- Easy way to put videoconferencing on every desktop
- Quick integration, with little training required
